Logo, wordmark & tagline usage

How the GG symbol, the “GATTILLO GLOBAL.” wordmark, and the “WE POWER ENTERTAINMENT.” positioning statement are meant to work together across the website — so the brand reads as a contemporary global company, not a repeated sales-brochure lockup.

ADOPTED	SOURCE	APPLIES TO
19 Aug 2026	docs/BRAND-GUIDELINES.md	concepts/premiere-red/ & root index.html

01 The three levels

- **GG** — the icon/symbol. Secondary brand device.
- **GATTILLO GLOBAL.** — the corporate brand (wordmark).
- **“WE POWER ENTERTAINMENT.”** — the positioning statement / brand promise.

Don't default to stacking all three (“GATTILLO GLOBAL / WE POWER ENTERTAINMENT.”) on every page — that reads as a sales brochure, not a contemporary global brand. Split them so visitors learn to recognize Gattillo Global as the company, and “We power entertainment.” as what it stands for.

02 Where each element goes

- **Header, every page** — GG symbol + GATTILLO GLOBAL, compact. The consistent corporate identifier. No tagline here.
- **Homepage hero** — “WE POWER ENTERTAINMENT.” featured prominently as the positioning statement, followed by one short line explaining what it means. Elsewhere, use the tagline selectively, only where it adds meaning.
- **GG symbol alone** — a secondary device: favicon, mobile navigation, footer detail, subtle backgrounds, section transitions, social avatars. Treat it as a signature, not decoration.

- **Footer, every page** — the complete signature: GG + GATTILLO GLOBAL + “We power entertainment.” The footer is the one place the full lockup belongs.

03 The GG mark itself

The GG symbol is the actual overlapping-G monogram from the master logo (`Business-Docs/LOGOs/GattilloGlobal_logo_transparency.png`) — not a placeholder or a stylized initial. It was cropped from the one file in the logo folder with genuine alpha transparency (`Business-Docs/LOGOs/email-signatures/gattillo-logo-black-transparent-full.png`), at the natural gap between the icon and the “GATTILLO” wordmark, then recolored per background.

ASSET	COLOR	USE
<code>gg-icon-bone.png</code>	Bone / cream <code>#EDE6D8</code>	The site's dark backgrounds — the one actually used on every page
<code>gg-icon-black.png</code>	Original black	Kept spare for any future light-background use

Don't recreate the mark as CSS text or a shape (e.g. a colored box with the letters “GG”) — always reference these image assets so it stays the real logo geometry.

04 The tagline's typography

The footer's “We power entertainment.” is live text, not an image — but it must still read as the brand's tagline, not generic body copy. In the master logo it's set in red, bold, uppercase, underlined with a swoosh; the footer recreates that with CSS rather than an image, so it stays crisp and themeable across the dark site: red, bold weight, uppercase, plus an underline rule standing in for the swoosh.

DON'T REGRESS THIS

It's easy to let this fall back to plain dim body-copy styling (muted tone, sentence case, no underline) — that reads as a caption, not the brand promise. If the tagline ever looks like a subtitle instead of a statement, it's wrong.

05 Deployment note — why the icon lives in two folders

`www.gattiloglobal.com` (production) is a Vercel deployment whose project root is `concepts/premiere-red/`, not the repo root. GitHub Pages serves the whole repo, so a

path like `../../assets/gg-icon-bone.png` from `concepts/premiere-red/index.html` works there — but on the production Vercel deployment that same file is served at the domain root, so `../../assets/...` 404s. See the separate Handoff Addendum for the full story.

- Any asset used by `concepts/premiere-red/*.html` lives inside `concepts/premiere-red/img/` and is referenced with a path relative to that folder — never `../` out of it.
- The root `Website/index.html` (internal concept-picker, GitHub Pages only) is the one page that can still use `assets/...` at the repo root.
